

GOOD UI

Is this UI good or bad? Why?

-The design is Good because of the clean and focused on helping the user find content quickly. The search bar is placed at the top, making it easy to locate. Category cards like Music, Podcasts, and Live Events guide users who are not sure what to search for, improving discoverability.

Which Golden Rule of UI applies?

Choose at least one, such as:

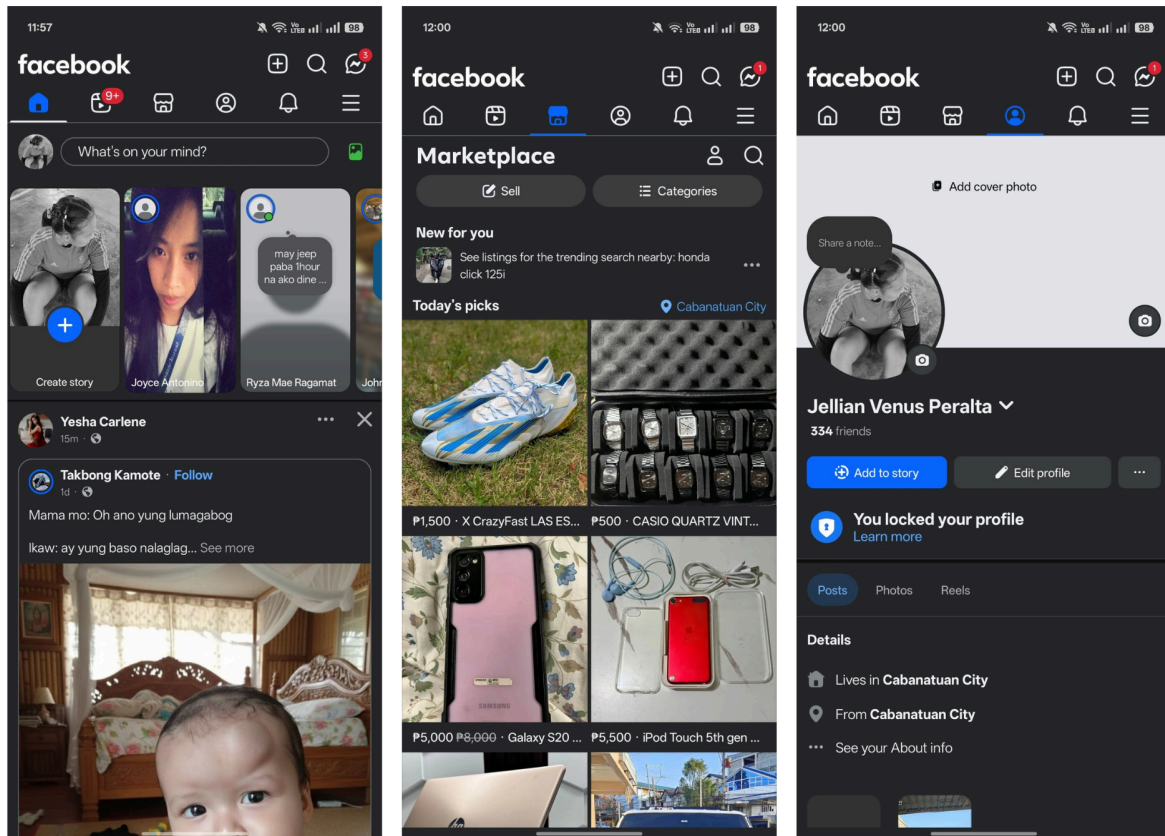

- Consistency- like the icons, layout, and colors follow the same design pattern as the rest of the app.

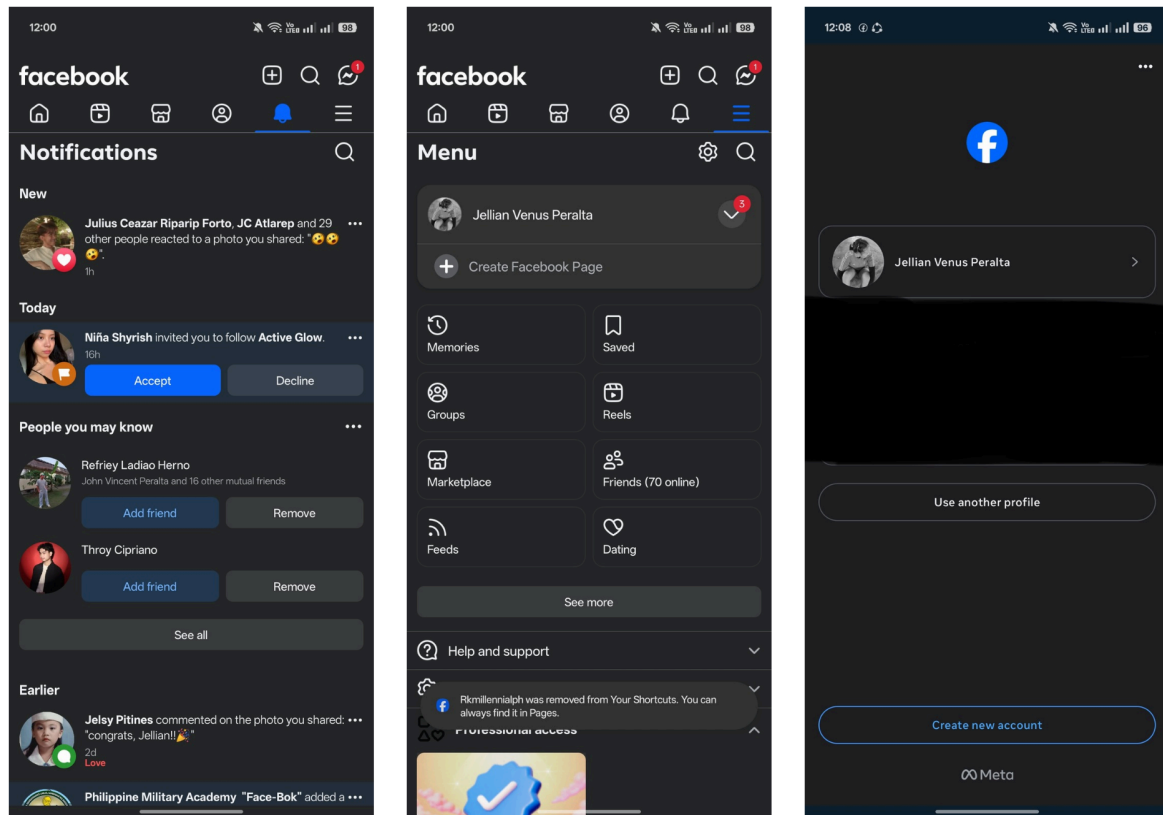

One simple improvement (in words only)

- For me I will add one simple improvement like adding a recent search history section below the search bar that displays previously searched songs, artists, or podcasts. This allows us or the other users to quickly revisit past searches without retyping, saving time and improving

efficiency. It also enhances convenience, especially for the users who frequently search for the same content, resulting in a smoother and more user friendly experience.

BAD UI

Is this UI good or bad? Why?

- The design is Bad because the layout is visually crowded and confusing. Items are displayed too closely together with inconsistent images and prices, which makes browsing stressful. The other users maybe have difficulty comparing products quickly.

Which Golden Rule of UI applies?

Choose at least one, such as:

-Simplicity- The interface lacks simplicity because of too much content.

One simple improvement (in words only)

-Group notifications into clear categories like comments, friend requests, reactions, and system alerts so we can quickly understand what each notification is about, focus on what is important, and avoid feeling overwhelmed by a long mixed list.
